

ESPRESSO MACHINE — SEMI-AUTOMATIC

URNEX CAFIZA

DAILY — END OF DAY

- 1 Remove portafilter, knock out puck.
- 2 Rinse basket under hot water, scrub with a brush.
- 3 Insert blind basket, run a plain water backflush (no chemical) — 3× 10-second cycles.
- 4 Wipe group head gasket and screen with a damp cloth.
- 5 Rinse and dry portafilter before storing.

WEEKLY

- 1 Insert blind basket with **1 Cafiza tablet** (or 1 tsp powder).
- 2 Run backflush: 5-second on, 10-second off — repeat 5×.
- 3 Remove Cafiza, run 3 plain-water flush cycles.
- 4 Soak portafilter + basket in Cafiza solution (1 tsp / 500mL hot water) for 20 min. Rinse thoroughly.
- 5 Wipe exterior panels and drip tray.

MONTHLY

- 1 Remove shower screen with screwdriver, soak in Cafiza solution 30 min.
- 2 Scrub screen with group head brush, rinse, reinstall.
- 3 Inspect group head gasket — replace if cracked or worn.
- 4 Check drip tray drain for clogs; clean if slow.

Never use Cafiza in a machine without running a full plain-water flush afterward — residue left in the group will bitter your espresso and damage seals over time.

STEAM WAND & MILK SYSTEM

URNEX RINZA

EVERY USE

- 1 Immediately after steaming: purge steam for 2–3 seconds to clear milk from tip.
- 2 Wipe wand with a damp, dedicated cloth while still hot.
- 3 Never let milk sit on the wand — it bakes on within minutes.

WEEKLY

- 1 Remove steam tip (if detachable), soak in Rinza solution (follow label ratio) for 30 min.
- 2 For milk wand: fill a pitcher with Rinza solution, submerge tip, steam through for 20 seconds.
- 3 Rinse: purge plain water through wand for 10 seconds. Wipe dry.
- 4 Reinstall tip and purge again before next use.

MONTHLY

- 1 Fully disassemble steam tip, soak all parts in Rinza 1 hr.
- 2 Use a pin or steam tip brush to clear any blocked holes.
- 3 Inspect o-rings on wand — replace if stiff or cracked.

Tip: Keep two pitchers labeled — one for milk service, one dedicated to Rinza cleaning. Mixing them up is one of the most common sources of off-flavors in milk drinks.

GRINDER

URNEX GRINDZ

DAILY

- 1 Wipe hopper lid and exterior with a dry cloth.
- 2 Brush out the chute and dosing chamber — stale grounds here affect the next shot's flavor.
- 3 Empty and rinse the grounds bin / knock box.

WEEKLY

- 1 Empty hopper completely.
- 2 Add **35g of Grindz** to the hopper (follow package for your grinder size).
- 3 Run through at your normal grind setting — discard output.
- 4 Follow with 1–2 cycles of coffee beans to purge Grindz residue, discard.
- 5 Wipe hopper interior with a dry cloth — never use water inside the hopper.

MONTHLY

- 1 Remove burrs (if accessible) and brush clean with a stiff brush.
- 2 Inspect burrs for wear — dull burrs produce inconsistent grind and uneven extraction.
- 3 Clean hopper with a damp cloth, dry fully before refilling.
- 4 Check calibration: run a standard shot and compare yield to your recipe.

Never use water or wet cloths inside the grinder burr chamber — moisture causes rust and can seize the burr set. Grindz is food-safe and designed specifically to absorb coffee oils without water.

BATCH BREWER / DRIP BREWER

URNEX CLEANCAF

DAILY — AFTER LAST BREW

- 1 Remove and rinse brew basket + filter holder under hot water.
- 2 Rinse carafes / airpots immediately — coffee oils set fast.
- 3 Wipe spray head with a damp cloth.
- 4 Leave carafes upside-down on a drying rack overnight.

WEEKLY

- 1 Mix **1 Cleancaf packet** with the recommended water volume (see packet).
- 2 Pour into water reservoir, run a full brew cycle through — no grounds, no filter.
- 3 Discard output. Run 2 full cycles of plain water to rinse completely.
- 4 Soak carafes in Cleancaf solution 15 min, rinse thoroughly.
- 5 Scrub spray head with a brush if visible buildup.

MONTHLY / AS NEEDED

- 1 Descale if brewing output is slow or water looks cloudy: use a descaling solution per machine manual.
- 2 Inspect spray head holes — use a pin to clear any clogs.
- 3 Soak removable brew basket parts in Cleancaf solution 30 min.
- 4 In hard-water areas (most of greater Boston): descale every 6–8 weeks.

Tip: Rinsing immediately after each brew is the single highest-impact habit — coffee oils left sitting for even a few hours go rancid and flavor the next pot. A quick 30-second rinse now prevents a 20-minute soak later.

MARCO POUR'D DISPENSER

URNEX CAFIZA

DAILY CLEANING CYCLE

- 1 Turn off boiler before cleaning to prevent accidental dispense.
- 2 Disconnect silicone tubing from beverage source.
- 3 Place tubing in a bucket of **Cafiza solution** (follow label ratio).
- 4 Press the cleaning option on the control box — run for ~60 seconds.
- 5 Replace bucket with fresh clean water. Press cleaning option again to rinse.
- 6 Press any font button **5x** to fully flush tubing and pump of residual water.
- 7 Twist off and hand-wash the **flow straightener**. Rinse and reinstall.
- 8 Wipe exterior with a damp cloth and light detergent. No spray or abrasives.

Never use a water jet or spray on the control box exterior — it will damage the panel finish and may cause electrical issues.

Note: The Pour'd has no separate weekly or monthly chemical cycle — daily cleaning is the full maintenance routine. If dispense flow seems slow or output quality drops, contact [Chelsi](mailto:techservices@atomicroastery.com) at techservices@atomicroastery.com for a service check.

QUICK REFERENCE — PRODUCT & CADENCE

Equipment	Urnex Product	Daily	Weekly	Monthly
Espresso Machine	Cafiza	Water backflush, rinse basket	Cafiza backflush + portafilter soak	Shower screen soak, inspect gasket
Steam Wand	Rinza	Purge + wipe every use	Rinza soak + steam through	Full disassemble + o-ring check
Grinder	Grindz	Brush chute, wipe exterior	Run Grindz + purge with coffee	Remove & inspect burrs

Equipment	Urnex Product	Daily	Weekly	Monthly
Batch Brewer	Cleancaf	Rinse basket + carafes	Cleancaf brew cycle + carafe soak	Descale, inspect spray head
Marco Pour'd	Cafiza	Disconnect tubing → Cafiza cycle → rinse → 5× flush → wash flow straightener	<i>Same daily cycle — no separate weekly</i>	<i>Service issue? Contact Chelsi</i>
